

Privacy Policy and Terms of Service

Our security processes are aligned with current best practices. We will continue to align our services with best practices as these evolve. All data is maintained on servers associated with Human Patterns and with Amazon Web Services. Additionally we have an SSL certificate for data encryption. We use Authorize.net for financial transactions.

We do not share data with any entity other than the person who completes the Human Patterns, Human Patterns in-house research and validation staff, and the administrator who orders an inventory through the Administrator's login process.

If we are aware we have been hacked or there has been any data security breach, we will inform you via the email address we have on file for each person completing Human Patterns and each administrator. We will also post a notification on the website itself.
